Lease date calculator

Print / Save PDF

Lease Date Calculator

Enter a lease start date and a whole-number term in calendar months to calculate the matching lease end date.

Lease start date

01/31/2028

Term in calendar months

1

Enter a whole number from 1 through 120. Enter 12 for a 12-month lease.

- **Calculated lease end**

February 29, 2028

The original start day does not exist in the target month, so the result uses that month's final calendar day. The written agreement controls the contractual end date.

Lease start **2028-01-31**	Term **1 month**
Calculated end **2028-02-29**	Month-end handling **Clamped to the target month's final day**

▼ Check an agreed end date and final-month rent

Enter the final day you expect to occupy the property. This checks the date against the calculated end above and estimates the final calendar month using actual days. It does not establish a right to end a tenancy or change your agreement.

The first and last occupied days both count. Currency labels the amount; no exchange conversion is applied. Nothing is saved.

21 occupied days, including 2028-01-31 and 2028-02-20.

Your entered last day is 9 days earlier than the displayed calculated date (2028-02-29). Confirm any difference with the agreement; this comparison does not resolve it.

Final calendar-month estimate: $1,241.38 USD

$1,800.00 monthly rent × 20 occupied days ÷ 29 calendar days. Charged dates: 2028-02-01 through 2028-02-20, inclusive.

Rounded once to the nearest cent. This is only the final calendar month, not the whole lease total. A 30-day, weekly, or other contractual proration basis can give a different amount. No deposits, fees, notice periods or legal entitlements are calculated.
