Compound Rent Increase Calculator

Model annual percentage escalation with repeated compounding and see starting rent, each yearly result, final rent, and total increase.

Starting monthly rent

2000

Annual percentage increase

10

Number of years

2

Enter a whole number from 1 through 100.

Currency

USD

- **Final rent after annual compounding**

$2,420.00

Applies the entered percentage once per year for 2 years. The table does not calculate cumulative rent paid.

Starting monthly rent	**$2,000.00**
Annual percentage increase	**10.00%**
Total increase amount	**$420.00**
Total percentage increase	**21.00%**

Year	Monthly rent	**Annualized rent**
0	$2,000.00	**$24,000.00**
1	$2,200.00	**$26,400.00**

2	$2,420.00	**$29,040.00**

▼ Compare the total cost over these years

Hypothetical monthly-payment scenarios, not legally permitted rates. Year 1 has 12 payments at the starting rent. The first increase happens after one full year; the final rent above starts after this payment horizon.

Comparison annual increase (%)

0

Use 0 to compare with rent staying unchanged. Enter 0–100%, up to four decimal places.

Total at 10%	Total at 0%	Primary minus comparison over 2 years
$50,400.00	**$48,000.00**	**$2,400.00**

After 2 annual changes: $2,420.00 per month at 10%, versus $2,000.00 at 0%. The first figure is an average weekly equivalent of $556.93 (monthly × 84 ÷ 365), not a weekly bill.

Payments within the horizon — first year uses starting rent

Payment year	Monthly at 10%	Monthly at 0%	Annual difference (primary minus comparison)
1	$2,000.00	$2,000.00	$0.00
2	$2,200.00	$2,000.00	$2,400.00

Each annual change rounds the new monthly rent to cents before the next change. Totals sum 12 payments at each of those monthly amounts. No fees, utilities, partial years or irregular increases are included. Currency changes the label, not the exchange rate. This is not legal or financial advice.

Check the new rent against your housing budget
